Plan4Health: Measuring Active Living in Dane County, Wisconsin

"The only adults I see riding a bike through the neighborhood are people who don’t live here. I can tell by their skin color and the type of bike they are riding."

Steve Meiers
City of Madison Engineering

SUMMARY
Plan4Health connects communities across the country, funding work at the intersection of planning and public health. Anchored by the American Planning Association (APA) and the American Public Health Association (APHA), Plan4Health supports creative partnerships to build sustainable, cross-sector coalitions. The Dane County Capital Region Healthy Communities (CRHC) initiative aims to increase opportunities for physical activity and access to nutritious food. Initiatives include working with local and state officials to incorporate health into planning, eliminate food deserts, and help neighborhoods.

CHALLENGE
In 2014, the rate of physical inactivity in Dane County was 18 percent and the adult obesity rate was 22 percent; six percent of the population had diabetes. Analysis from the University of Wisconsin showed that block groups that were more walkable and closer to public transportation also had lower rates of chronic diseases. The CRHC initiative responded to these health and physical activity disparities by developing a comprehensive, locally specific index (Active Living Index – ALI) to evaluate the extent to which a place is conducive to active living.

During the first half of 2016, the Dane County coalition presented the Active Living Index to national audiences at the Active Living Research Conference, the American Planning Association National Conference, and the ESRI International User Conference.

Success Stories
http://nccd.cdc.gov/nccdsuccessstories/
The CRHC initiative includes representatives from a range of fields and expertise in Dane County: the Regional Planning Commission, the City of Madison, the regional transportation planning agency, the University of Wisconsin, the Healthy Kids Collaborative, the local farmers market and food cooperative. The CRHC represents these organizations as well as residents from the target communities – such broad stakeholder involvement has ensured a comprehensive and balanced approach to the coalition’s work from the beginning. The Active Living Index was created through this multi-stakeholder collaboration, and has thus successful as a web-based interactive data tool that serves to educate and empower decision makers, planning and public health professionals, and residents.

The coalition is leading a communications campaign combining messages about the importance of policy, systems, and environment change with workshops and training sessions. This effort raises awareness about possible interventions, and also strengthens the professional capacity for work at the intersection of planning and public health, by consolidating the institutional collaboration necessary for changing the ‘silos’ approach.
